

Senior Wellness Testing

Leading up into and during winter is the perfect time to check the general health of all senior animals. Gribbles Veterinary has panels developed by our team of pathologists specifically for senior animals. These can be used to establish a baseline for future comparison, as well as ongoing health monitoring.

Our discounted biochemistry panels (below) are great by themselves, but are even better when used in conjunction with a CBC as part of your in-clinic senior wellness promotions. Alternatively, our conveniently packaged Senior Pet Checks cover all bases in one hit. All pricing is per our current price book.

2017 WINTER PROMO - For the winter months (June, July and August) we will be offering a **FREE** urine specific gravity when you submit urine together with bloods for either senior feline or senior canine biochemistry panel - just ensure you quote **USGF** on your submission form and we'll do the rest!

Senior Canine Panel	ALP, ALT, calcium, creatinine, urea, total protein, albumin, globulin, AGR
Senior Feline Panel	ALP, ALT, creatinine, urea, total protein, albumin, globulin, AGR, total T4
Senior Pet Checks	Senior canine or feline panel + CBC + urinalysis

To assist you in marketing senior wellness testing to your clients, we have a brochure (free of charge) explaining the reasons for checking the health of senior pets, what checks are usually involved and why blood testing is recommended. These brochures can be stamped /branded with your clinic name. We also have a free of charge advertisement (jpeg file) that can be used for promotions on your clinic Facebook page (see below).

If you have any questions or would like any further information regarding promotional material available, please contact your local Gribbles Veterinary laboratory or your business development manager.
